## SPRINT 3 OBJECTIVE

Build a powerful multi-criteria stock screener and peer comparison engine to identify high-quality companies and benchmark them against their peers.

## DAY 15 OVERVIEW

## OBJECTIVE

Create a flexible filter engine that loads screener\_config.yaml and applies threshold-based filters on financial\_ratios table using pandas query.

## KEY HIGHLIGHTS

- ✓ YAML configuration loader
- ✓ Dynamic multi-metric filtering
- ✓ Pandas query engine
- ✓ Clean, modular & reusable code
- ✓ Output ready for further ranking

## WHAT WE IMPLEMENTED

## YAML Config Loader

Loads filter rules from screener\_config.yaml

## Dynamic Filter Builder

Converts YAML filters to pandas query conditions

## Apply Filters

Executes pandas query on financial\_ratios DataFrame

## Result Output

Returns filtered DataFrame ready for ranking & export

## screener\_config.yaml (Example)

```
presets:  
  quality:  
    description: "High quality companies"  
    filters:  
      - metric: roe  
        operator: ">"  
        value: 15  
      - metric: debt_to_equity  
        operator: "<"  
        value: 1  
      - metric: free_cash_flow  
        operator: ">"  
        value: 0  
  value:  
    description: "Value investing screen"  
    filters:  
      - metric: pe_ratio  
        operator: "<"  
        value: 20  
      - metric: pb_ratio  
        operator: "<"  
        value: 3

## DAY 17 — RANKING ENGINE (COMPOSITE SCORING)

## RANKING ENGINE LOGIC

Composite Score =

## Profitability (50%)

- ROE
- ROCE
- Net Profit Margin

## Growth (30%)

- Revenue CAGR (5Y)
- PAT CAGR (5Y)
- EPS CAGR (5Y)

## Valuation (20%)

- P/E
- P/B
- EV/EBITDA

## RANKING ENGINE FEATURES

- ✓ Sector-relative normalisation applied
- ✓ Score scaled between 0 to 100
- ✓ RANK() OVER (PARTITION BY sector) used
- ✓ Handles missing values & outliers
- ✓ Top-N results generated per sector & overall

## OUTPUT EXPORT

- All 92 companies scored
- Composite score (0-100)
- Sector rank & overall rank
- All key KPIs included
- Sort & filter enabled

## SPRINT 3 OBJECTIVE

Build a powerful multi-criteria stock screener and peer comparison engine to identify high-quality companies and benchmark them against their peers.

## DAY 21 OVERVIEW — FINAL VALIDATION &amp; REVIEW

## OBJECTIVE

Run all DQ rule tests, fix failures and validate the entire Screener & Peer Comparison engine.

## KEY HIGHLIGHTS

- ✓ All Data Quality (DQ) rules executed
- ✓ 0 Failures (All tests passed)
- ✓ All modules integrated & validated
- ✓ Peer percentile engine verified
- ✓ Screener outputs verified
- ✓ Excel exports verified
- ✓ Radar charts generation verified
- ✓ Sprint retrospective completed

## SPRINT 3 RETROSPECTIVE (sprint3\_retro.md)

## WHAT WENT WELL ✓

- All modules built as per plan
- Peer benchmarking engine performed well
- Radar charts improved analytical insights
- Excel exports were successfully automated
- Zero DQ failures - high quality output

## CHALLENGES FACED ⚠

- Handling missing data in some KPIs
- Aligning sector classifications
- Optimizing percentile calculations

## KEY LEARNINGS 📖

- Peer comparison adds huge value
- Composite scoring helps better decisions
- Data validation ensures trust & reliability

## NEXT IMPROVEMENTS 🚀

- User interface for screeners (Phase 2)
- More metrics & custom peer groups
- Historical trend filters (Multi-year)

## DQ RULES EXECUTION SUMMARY
